

Prionex[®] 10%

Description: Prionex[®] is a 10% aqueous solution of a polypeptide fraction of highly purified dermal collagen of porcine origin which has excellent protein stabilizing properties. Prionex[®] is prepared by partial hydrolysis and is terminally sterilized. It is free from cartilage, bone and plasma components and is therefore a pure form of partially hydrolyzed gelatine type A.

Application: Due to the chemical nature and the standardised quality, Prionex[®] can be used as an inert protein stabilizer and as an additive for cell culture media.

Advantages:

- Non-toxic and non-antigenic
- Filterable through a 0.2 µm membrane
- Heat-stable
- Free from nucleic acids, polysaccharides and lipids
- Free from any additives

MW: The average molecular weight is approx. 20'000 Da, estimated by gel permeation chromatography.

Solubility: Prionex[®] is freely soluble in water, diluted electrolyte solutions, glycerol and DMSO as well as in diluted ethanol and ammonium sulphate solutions below 20% saturation.

Storage: 15 - 25°C, protected from light
