Warning

The plasma is prepared from normal citrated human plasma. The starting material has been tested and found negative for HIV-1/-2 antigen(s), STS, antibodies to HIV and HCV, and non-reactive for HbsAg, HCR RNA and HIV-1 RNA.

As no known test method can provide complete assurance that products derived from human blood will not transmit HBsAg, HCV, HIV-1, HIV-2 or other blood-borne pathogens, this reagent should be handled as recommended for any potentially infectious human specimen.

Presentation

Screw-capped vial containing 1 mL frozen plasma.

Preparation and Stability

Thaw 1 ml vial in 37 °C water bath for 5 minutes.

Product is stable until date stated on vial label when stored at -30 °C. Once thawed, plasma is stable for 4 hours at 2-8 °C in original vial.
