

alpha-2-Antiplasmin Deficient Plasma

Product No. ADG213

Lot XXXXXX

Description

alpha-2-Antiplasmin (α 2-Antiplasmin) Deficient Plasma is manufactured from pooled normal human plasma depleted of alpha-2 Antiplasmin using antibodies directed to alpha-2 Antiplasmin. Only the highest quality citrated plasma is used as starting material.

Specification

Activity assay	Lot XXXXXX
PT (Siemens Innovin)	XXX sec
APTT (Siemens Actin FSL)	XXX sec
Fibrinogen (clottable)	XXX g/L
α 2-Antiplasmin antigen (ELISA)	< XXX U/ml

Application

For research assays of alpha-2 Antiplasmin antigen and functionality as a negative control and for dilution of standards and test samples.

Warning

The plasma is prepared from screened normal citrated human plasma that have been tested and found negative for HIV and Hepatitis by FDA-approved methods.

As no known test method can provide complete assurance that products derived from human blood will not transmit HBsAg, HCV, HIV-1, HIV-2 or other blood-borne pathogens, this reagent should be handled as recommended for any potentially infectious human specimen.

Presentation

Set of 5 clear, screw-capped vials each containing 1 mL of lyophilized plasma. The plasma contains 50mM HEPES and stabilizers.

Reconstitution and Stability

One vial of lyophilized product is reconstituted by addition of 1 mL of distilled water, employing gentle agitation for 15 minutes, at room temperature. Stability after reconstitution is 4 hours at ambient (18° -25°C), or 30 days at -20 °C.

Storage

Prior to reconstitution, dried plasma should be stored at 2° - 8°C.
